

**Good morning sir,**

**Today we are here to present about what we have done so far,**

**This is our agenda,**

**As we have mentioned in proposal presentation,**

**.....**

**This is our aim**

**These are our objective**

**These are our functional requirement**

**These are our non-functional requirement**

**We are going explain our system using our diagram,**

**This our class diagram**

**These are our main classes and these are under the product class**

**This is our er diagram**

**This is our use case diagram,**

**This is our project plan, we are come to 50% of our development process,**

**These are our group members, these are individual contribution,**

**Now I will start the demonstration part,**

**This is our home page,**

**If they like to build their own pc, they have to register first,**

**They can also explore our products,**

**If they like to buy, they have to register first,**

**This is where users can register them self,**

**They can register as a customer or as a technician,**

**If a user registering as a customer, they have to fill all these information and they will receive otp for their email validation,**

**But if they want to register as a technician, after filling these,and enter their otp, they have to confirm an agreement, and they want submit their cv, specification and experience,**

**Forget password option ,,,**
